

## INSTRUCTIONS

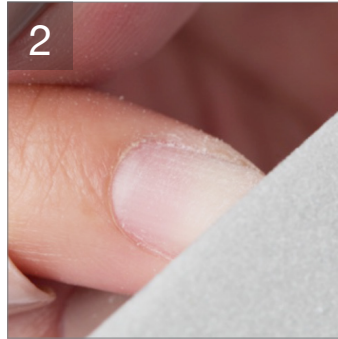

# POLYGEL<sup>®</sup> Removal

PolyGel<sup>®</sup> easily files off because its unique TriPolymer Technology is light and durable, while still remaining pliable, allowing for quicker break down during removal.

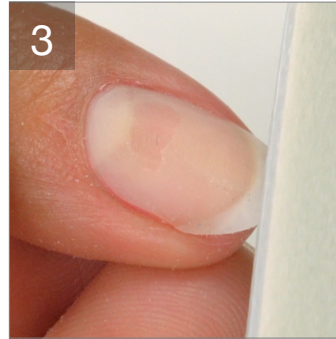

### Step 1

Using a 150 or 180 grit file, file off the majority of the product and reduce the length if needed. **DO NOT** file the natural nail.

### Step 2

Switch to a 100/180 buffer. Gently buff down the enhancement to leave a thin application on the nail.

### Step 3

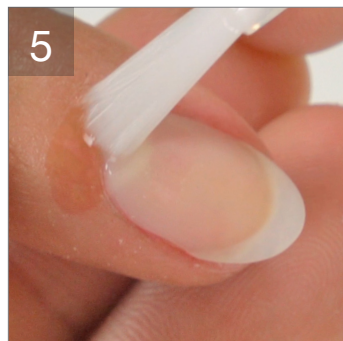

Using a 220/280 buffer, lightly buff the nail and blend the remaining enhancement into the natural nail.

### Step 4

Cleanse with **NAIL SURFACE CLEANSE** and a **WIPE IT OFF** lint-free nail wipe.

Electric File Option: E-File off the majority of the product with medium to coarse carbide and E-File with medium to coarse sanding band to reduce the length if needed. **DO NOT** file the natural nail.

### Step 5

Massage **NOURISH CUTICLE OIL** into skin surrounding the nail plate.
